Dermaplaning Facial
An Exfoliative treatment performed among a select few to "shave away" the crusty skin layers that can arch over and blunt the perfect skin surface leaving the skin even, smooth and blemish free. Dermaplaning is an effective method of skin surface preparation. It is a skin rejuvenating technique that can include a light mechanical exfoliation of the epidermis.

Intensive Oxygen Therapy Facial
Your skin looks older than you are?

Ozone technology, including ozone currents, is now being utilised in many 敷容 procedures as an effective way to increase skin oxygenation and metabolism.

Meso Digital Skin Revitalising

This treatment is designed to boost collagen production for softened, plumped and smoother skin. We use a state-of-the-art digital technology to deliver a precise pulse of ozone directly to the surface of the skin. This process stimulates the growth of new collagen fibres which produce the production of elastin and the regrowth of dermal tissues. Your skin surface is also treated to reduce fine lines and improve the appearance of pores, scarring and oiliness.

Ageing Prevention Treatment

A high performance, oxygen-based, rejuvenating treatment. Includes a clay-based mask, light exfoliating treatment and a tailormade super-nutrient serum. This innovative facial is suitable for all skin types and minimises fine lines and pores. Contains Antioxidants that help protect the skin from damage by free radicals.

DermaPeel Hydra Facial
The latest soothing, non-invasive skin resurfacing treatment. Includes a light enzyme peel to optimise the exfoliating process.

Eye lids and brows are lifted, wrinkles reduced and the skin is left feeling fresh and firm.
